***Allowable Subject Matter***

1. The following changes to the drawings have been approved by the examiner and agreed upon by applicant: Figs. 25-27 should be labeled prior art. In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

2. Claims 1-8 are allowed.

3. The following is an examiner's statement of reasons for allowance:

While the prior art of record (Mack, Lee *et al.*, Bate *et al.*, Mahani *et al.*, and Ohtsuki, for example) teaches. However, the prior art of record fail to teach with respect to claim 1, a manipulator comprising an operation command unit provided with an attitude adjusting unit and an end effector control unit; a connecting unit having one end connected to the operation command unit; a working unit connected to the other end of the connecting unit and provided with an end effector and a support unit supporting the end effector for motions in at least two degrees of freedom of motion; and a control unit that transmits an operation command provided by the attitude adjusting unit to the support unit to adjust the attitude of the end effector and transmits an operation command provided by the end effector control unit to the end effector to operate the end effector; wherein the support unit includes a first joint capable of turning about a first axis perpendicular to a center axis of the connecting unit, and a second joint capable of

turning about a second axis perpendicular to the first axis, the end effector has a center axis substantially parallel to the second axis, the attitude adjusting unit includes a third joint capable of turning about a third axis perpendicular to the center axis of the connecting unit and a fourth joint capable of turning about a fourth axis perpendicular to the third axis, and the end effector control unit is provided to be gripped by fingers extending substantially in parallel to the fourth axis. With respect to claim 7, a manipulator comprising a working unit provided with an end effector and a support unit supporting the end effector for motions in at least two degrees of freedom of motion; wherein the support unit includes a first joint capable of turning about a first axis, and a second joint capable of turning about a second axis perpendicular to the first axis, wherein the working unit has two working joints mounted on the second joint, the two working joints being capable of turning about the second axis, the two working joints are rotated in the same direction to rotate the second joint, and the two working joints are rotated in opposite directions, respectively, to drive the end effector for gripping and releasing in combination with the other features of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
